# INVENTORY OF MUNICIPAL WATER FACILITIES - 1954

This Inventory, obtained through the cooperation of the State Health Departments, shows the organized community water facilities for all communities in the United States of over 10,000 population (1950 Census) and for a sample of about 40% of all communities having 5,000 to 10,000 population in 1950.

For the purposes of the following discussion, each individual item listed in column 1 is defined as an "entry".

Entries appear in alphabetical order.

An "x" in the listings indicates that the data requested was unknown. A dash "-" signifies the data does not apply or was not supplied.

## Detailed Notes for Columns

### Column 1 - Community

Entries marked with a star "*" have facilities which serve one or more additional entries.

The following abbreviations are commonly used in this column when necessary:

D. or Dist. .... District
Hgts. .... Heights
Inst. .... Institute, Institution
M.U.D. .... Municipal Utility District
M.W.D. .... Municipal Water District
Pk. .... Park
San. .... Sanatorium, Sanitarium
Sch. .... School
W.D. .... Water District
W.W.D. .... Water Works District

### Column 2 - 1950 Population, Estimated Population Served

Top-line Entry - shows the 1950 population, as reported by the U. S. Bureau of the Census.

Bottom-line Entry - indicates the estimated total number of people served by the facility.

### Column 3 - Year Operation Started (Data obtained from the "Census of Water and Sewerage Works, 1949")

Top-line Entry - Present supply...the year the present source of supply was put into service, or the latest year during which a new or additional source was developed.

Bottom-line Entry - Present treatment plant... the year the present treatment plant was put into operation, or the date of the latest major revision or addition (not replacement).

Reproduced by
NATIONAL TECHNICAL
INFORMATION SERVICE
U S Department of Commerce
Springfield VA 22151

Column 4 - Ownership (Data obtained from the "Census of Water and Sewerage Works 1949")

M - Public (federal, state, county, municipal, district, etc.)

P - Private (private corporations, companies, institutions)

Column 5 - Number of Services, Number of Meters

Top-line Entry - Number of accounts served by the facility.

Bottom-line Entry - Number of meters used in the water system.

Column 6 - Source of Supply

The source or sources from which water is obtained. The following abbreviations are used in this column when necessary:

| | | | | | |
|---|---|---|---|---|---|
| Aux. | .... | Auxiliary | L. | .... | Lake |
| Br. | .... | Brook, branch | N. | .... | North |
| Cr. | .... | Creek | R. | .... | River |
| E. | .... | East | S. | .... | South |
| Emerg. | .... | Emergency | Spg. | .... | Spring |
| Fk. | .... | Fork | Surf. | .... | Surface |
| Imp. | .... | Impounded Impounding | W. | .... | West |

Column 7 - Maximum Dependable Draft of Source - MGD

The maximum dependable draft which can be made on the source of water supply based on the driest period of record (in millions of gallons per day). For ground water supplies the figure is the sustained yield believed possible during the next 5 years. The designation "UNL" signifies unlimited.

Column 8 - Rated Plant Capacity, Average Plant Output - MGD

Top-line Entry - the maximum rated daily capacity on the basis of filters, pumps or other limiting factor, in million gallons per day.

Bottom-line Entry - the average daily output in million gallons per day.

Column 9 - Treatment (Data obtained from the "Census of Water and Sewerage Works, 1949". Data on Fluoride Adjustment obtained from Dental Resources Division PHS, 1955.)

Where the treatment is at all extensive, one or more symbols identifying the general type or function of the plant precede those used to identify the particular treatment plant or method. In general, a plant is not classified as a "purification plant" unless filters having fine granular material (sand or anthracite) are used.

Principal treatment features, identified by capitalized letters, are further described by lower case letters following them. In general, the symbols are arranged in the order in which treatment occurs. Combination units performing more than one function in a single structure are denoted by enclosing the appropriate symbols in parentheses. Enclosures in brackets indicate parallel or alternate operation.

Both lines of this column are used when necessary.

900

Treatment coded as follows:

Type of Plant - P - Purification
H - Softening
I - Iron or Manganese removal
D - Disinfection

Treatment or Device

A - Aeration
Ac .. contact beds or trays, coke or other material
Am .. patented aerator
As .. spray aerator
At ... overflow trays cascade or other splash aerator
Ao .. other type aerator

C - Chemical dosage for coagulation or softening
Ca .. alum
Ci .. iron salts
Cl .. lime
Cs .. soda ash
Ct .. activated silica
Co .. other coagulant

D - Disinfection
Dc .. chlorine gas
Dd .. dechlorination
Dh .. hypochlorites
Ds .. free residual chlorine
Dx .. chlorine dioxide
Dz .. ozone
Do .. other means

F - Filters
Fa .. anthrafilt
Fc .. roughing or contact
Fd .. Diatomaceous earth
Fg .. gravity (slow)
Fp .. pressure
Fr .. gravity (rapid)
Fs .. sand
Fz .. zeolite

K - Chemical dosage for corrosion correction or water stabilization.
Kc .. phosphate compounds
Kg .. chlorine gas
Kh .. hypochlorite
Ko .. sodium silicate
Kp .. alkali feed for pH adjustment

M - Mixing device or tank
Ma .. air agitation
Mb .. baffle mix
Mh .. hydraulic (standing wave flume)
Mi .. injection or pump suction application
Mp .. slow mechanical mix
Ms .. patented sludge blanket
Mt .. rapid mechanical mix
(MtpsSv) .. "Liquon Sludge Contact Reactor": "Accelator": "Precipitator"

N - Ammoniation
Nc .. ammonium compound
Ng .. ammonia gas

R - Recarbonation

S - Sedimentation
Sb .. baffled basins (other than inlet or outlet baffles)
Sc .. covered basins (other than housed)
Sm.. mechanical sludge removal
So .. open basin (may be inside plant building)
Sv .. up and flow cylindrical tanks
MtpsSv .. "Liquon Reactor"; "Accelator"; "Precipitator"

T - Chemical taste and odor control
Tc .. activated carbon
Td .. chlorine dioxide
Ts .. sulfur dioxide
Tz .. ozone
To .. other

V - Fluoride adjustment
Va .. hydrofluosilicic acid
Vs .. sodium silicofluoride
Vt .. sodium fluoride
Vo .. other fluorides
Ve .. ammonium silicofluoride
$V_{1.2}$ .. 1.2 p.p.m. natural fluorides

Column 10 - Laboratory Control (Data obtained from the "Census of Water and Sewerage Works, 1949")

Refers to control by a plant laboratory, not to samples analyzed elsewhere.

C - Chemical (other than chlorine residual)
B - Bacteriological

Column 11 - Distribution Storage - MG (Data obtained from the "Census of Water and Sewerage Works, 1949)

Top-line Entry - Pump to mains. Storage in million gallons of finished water in the distribution system area that must be pumped into mains (clearwells, underground or low level storage, etc.)

Bottom-line Entry - Gravity to mains. Storage in millions of gallons of finished water in the distribution area that will flow into mains by gravity (elevated tanks, standpipes, high level reservoirs, etc.) Does not include water storage in impounding reservoirs or balancing reservoirs on long supply conduits.

Column 12 - Improvements Needed

Both lines of this column are used when necessary. The following code is used:

N - None (when stated)
U - Source, underground
S - Source, surface
M- Transmission
P - Pumping
T - Treatment
G - Ground storage
L - Elevated storage
D - Distribution system
O - Other
